<u>Assignment 7 : Android App which is Supporting Basic Library Management</u>

<u>Functions</u>

Below is a summary of what I have learned and focused on in this assignment.

1. **Android Components**

   ▪ **API level**

Android Version	API Level	Version Name
Android 7.0	24	Nougat

   • **Newly learned key points in this assignment**

   ▪ Develop codes to support CRUD functions

   ▪ Create / Maintain data in the SQLite database

   ▪ How to develop complete small android application

   ▪ Create user interface

   ▪ Working with DatabaseHelper & Create Database & Table

Component	Innovative Android Version	Minimum Supported Version	Impact on Android	Usability
SQL Lite	Android 1.0	Android 1.0 (API Level 1)	SQLite offers a lightweight database solution, making it easier to manage data locally on the device.	Suitable for apps needing structured data storage with SQL capabilities.

2. Functionality of the mobile application

The following steps were taken to create this application.

1. Analyze the requirements

2. Develop code to set up the tables

3. Develop codes to support CRUD functions

4. Integrate the codes to respective Buttons

5. Make attractive user interface

6. Test with real data

Following the above steps, the following modules were created.

This application consists of the main modules.

- Members

- Books

- Publisher

- Authors

- Lending

- Branch

In this module the CRUD functions are functional & maintain - Book details, Member details, Publisher details, Author details, Lending details & Branch details.

- **Admin Login User Name - "admin"**
  Admin Login Password - "admin123"

- **Member Login User Name - "navindu"**
  Member Login Password - "navindu"

- **tools:targetApi="34" in AndroidMainfest.xml**

- **menu.xml in res**

- **ic_action_search_foreground.xml in drawable**

- **ic_launcher_background.xml in values & list_item.xml in layout**

3. Running the Application on my android mobile device

I was running the android app for testing in my android mobile device.

My android mobile device is Realme X2 RMX1993.

Below is a Screenshots of my android mobile device (Realme X2 RMX1993) while the app was running.

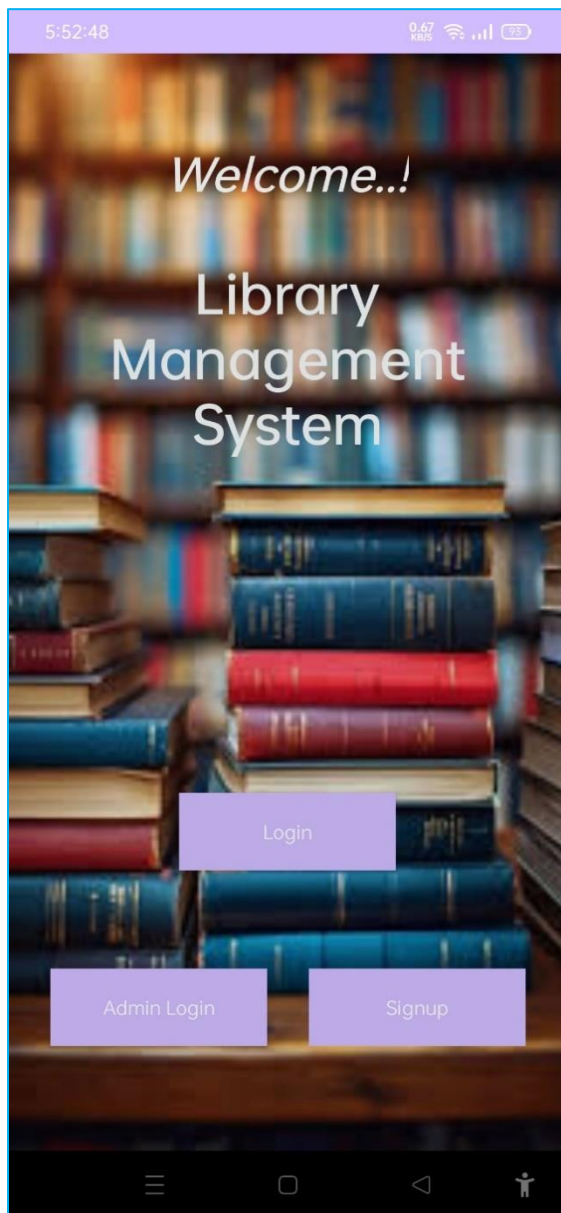

Photo 1 : Assignment7-MIT3206-22550119 in Realme X2 RMX1993

4. Main Coding files

- **MainActivity.java**

```java
package com.assignment7_mit3206_22550119;

import android.content.Intent;
import android.os.Bundle;
import android.view.View;
import android.widget.Button;

import androidx.appcompat.app.AppCompatActivity;

public class MainActivity extends AppCompatActivity {
    private Button button;

    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_main);

        button = findViewById(R.id.btnregister);
        button.setOnClickListener(new View.OnClickListener() {
            @Override
            public void onClick(View v) {
                Signup();
            }
        });

        button = findViewById(R.id.btnadminlogin);
        button.setOnClickListener(new View.OnClickListener() {
            @Override
            public void onClick(View v) {
                AdminLogin();
            }
        });

        button = findViewById(R.id.btnmemlogin);
        button.setOnClickListener(new View.OnClickListener() {
            @Override
            public void onClick(View v) {
                MemberLogin();
            }
        });
    }
```

```java
    public void Signup(){
        Intent intent = new Intent(this, Signup.class);
        startActivity(intent);
    }

    public  void MemberLogin(){
        Intent intent = new Intent(this, MemberLogin.class);
        startActivity(intent);
    }

    public  void AdminLogin(){
